CHAPTER 8

01

Mobile App Publishing

Mobile App Publishing

Mobile app publishing refers to the process of making a mobile application available to users for download and installation.

Find, Download and Purchase

Revenue of mobile apps worldwide 2017–2025, by segment (in million U.S. dollars). Source: [Statista](#)

Official App Store

Official mobile app stores are digital platforms provided by operating system manufacturers or major technology companies where users can discover, download, and install mobile apps for their devices.

And more...

Why Official App Stores?

- Wider Audience Reach
- Trust and Credibility
- Security and Privacy
- Consistent User Experience
- Automatic Updates
- Monetization Options
- Device Compatibility
- Marketing and Promotion
- Developer Support & Resources

How much it costs for these benefits?

Google Play Console

The screenshot shows the Google Play Console dashboard in a web browser. The browser's address bar displays "play.google.com/console". The left sidebar contains a menu with the following items: "All applications", "Dashboard" (highlighted), "Inbox", "Statistics", "Managed publishing", "Release", "Grow", "Quality", "Monetize", and "Policy and compliance". The main content area is titled "Dashboard" and features a "Set up your app" section. This section includes an icon of a building and two people, a description "Provide some information about your app and set up your store listing", and a "Hide tasks" link. Below this, there are two sections of tasks: "LET US KNOW ABOUT THE CONTENT OF YOUR APP" with four items (App access, Ads, Content rating, Target audience) and "MANAGE HOW YOUR APP IS ORGANIZED AND PRESENTED" with two items (Select an app category and provide contact details, Set up your store listing).

Google Play Console

OTA Update for React Native

Why?

- OTA Update makes fixing small bugs and pushing quick fixes a snap in between app store submissions
- OTA Updates allows you to release enhancements in response to user feedback or market trends

Why not?

- OTA updates can only be used for updating JavaScript code and certain assets
- Changes to native modules or resources often require a new version of the app distributed through the app store.

03

Mobile App Maintenance

Goals

Sustain and enhance the long-term success of the mobile application

Objectives

- Bug-Free Performance
- Security Excellence
- Compability Assurance
- User-Centric Enhancement
- Regulatory Compliance
- Continous Learning
- Transparent Communication

Mobile App Maintenance Types:

Introduction to Sentry.io

Can you fix them all?

Imagine your app has been released on App Store and Google Play

Your app crashed on a certain type of device

You can't meet your customers to access their device for debugging.

Some errors only occur on a special condition

You can't reproduce the error or can't access user's credential to analyze

Sentry is an open-source platform that provides real-time error tracking and monitoring for software applications.

Sentry vs Crashlytics

	Sentry	Firebase Crashlytics
Context and Insights	Offers metadata, stack traces, breadcrumbs, suspect commits, screenshots, view hierarchy	Offers metadata, stack traces, keys, logs
	Source Map support for React Native	No Source Map support for React Native
	Search and filter by custom tags; view trends and analyze data with Dashboards and Discover	Limited search and filter capabilities; export and analyze data in BigQuery
Workflow	Fully customizable alerts	Pre-set alerts
	Automatic issue assignment and notifications	No issue assignment or targeted notifications
	Two-way data flow between other tools	One-way data flow to other tools
Innovation and Scale	Product investments focused on enabling developers to adopt new technologies	Product investments focused on deeper integration with Firebase Platform
	Vendor agnostic	Reliant on Firebase Platform
	EU Data residency	Not GDPR compliant
