01. Mobile App Quality Evaluation

Quality Factors

How can we determine a "good" mobile app?

USER EXPERIENCE

Your app should give users a unique value, great usability, and good performance.

BUSINESS GOALS

Your app should have a clear vision along with marketing and financial logistics.

SECURITY & PRIVACY

Your app should handle user data and personal information safely, with the appropriate level of permission.

User Experience

- A great concept that solves a problem or fills a need.
- A well-developed user interface that is easy to navigate and pleasant to look at.
- Solid functionality that is easy to use but powerful enough to keep users coming back for more.
- A marketing plan will make users aware of the app and encourage them to download it.
- A customer service plan that makes it easy for current and potential customers to get in touch with you

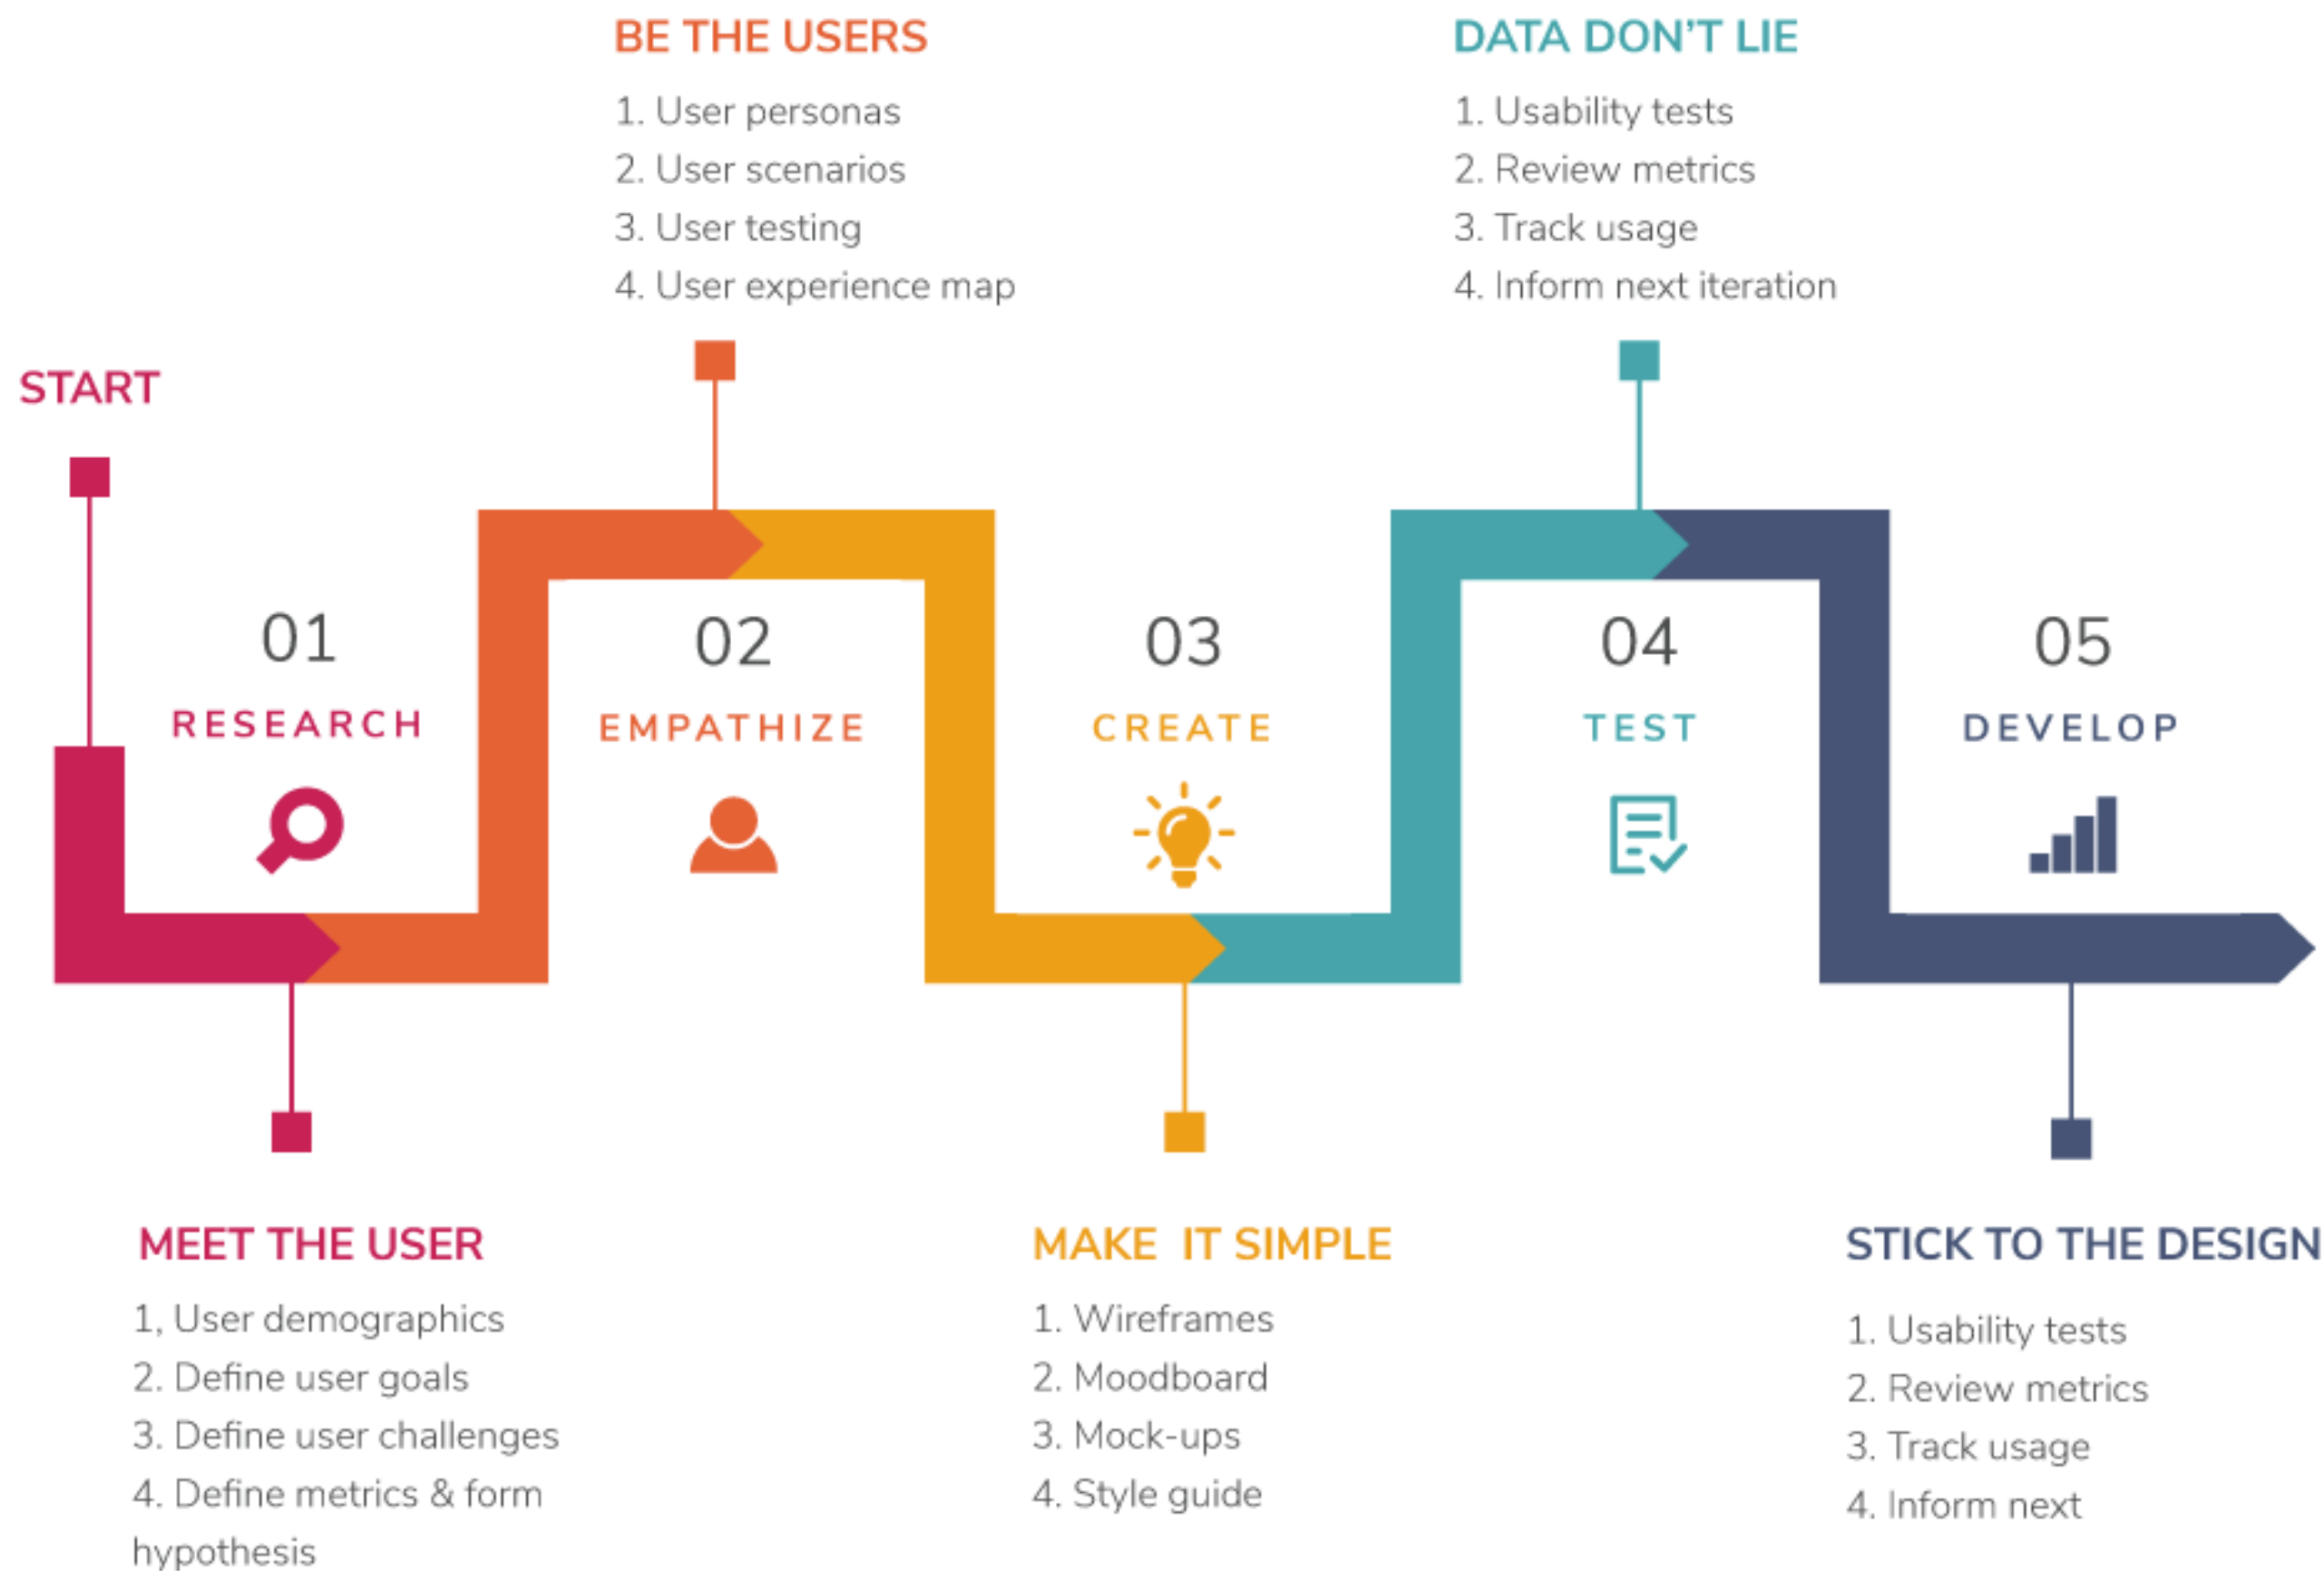

Business Goals

- Increase customer engagement and loyalty
- Boost profits
- Improve working condition
- Balance between budget and development cost

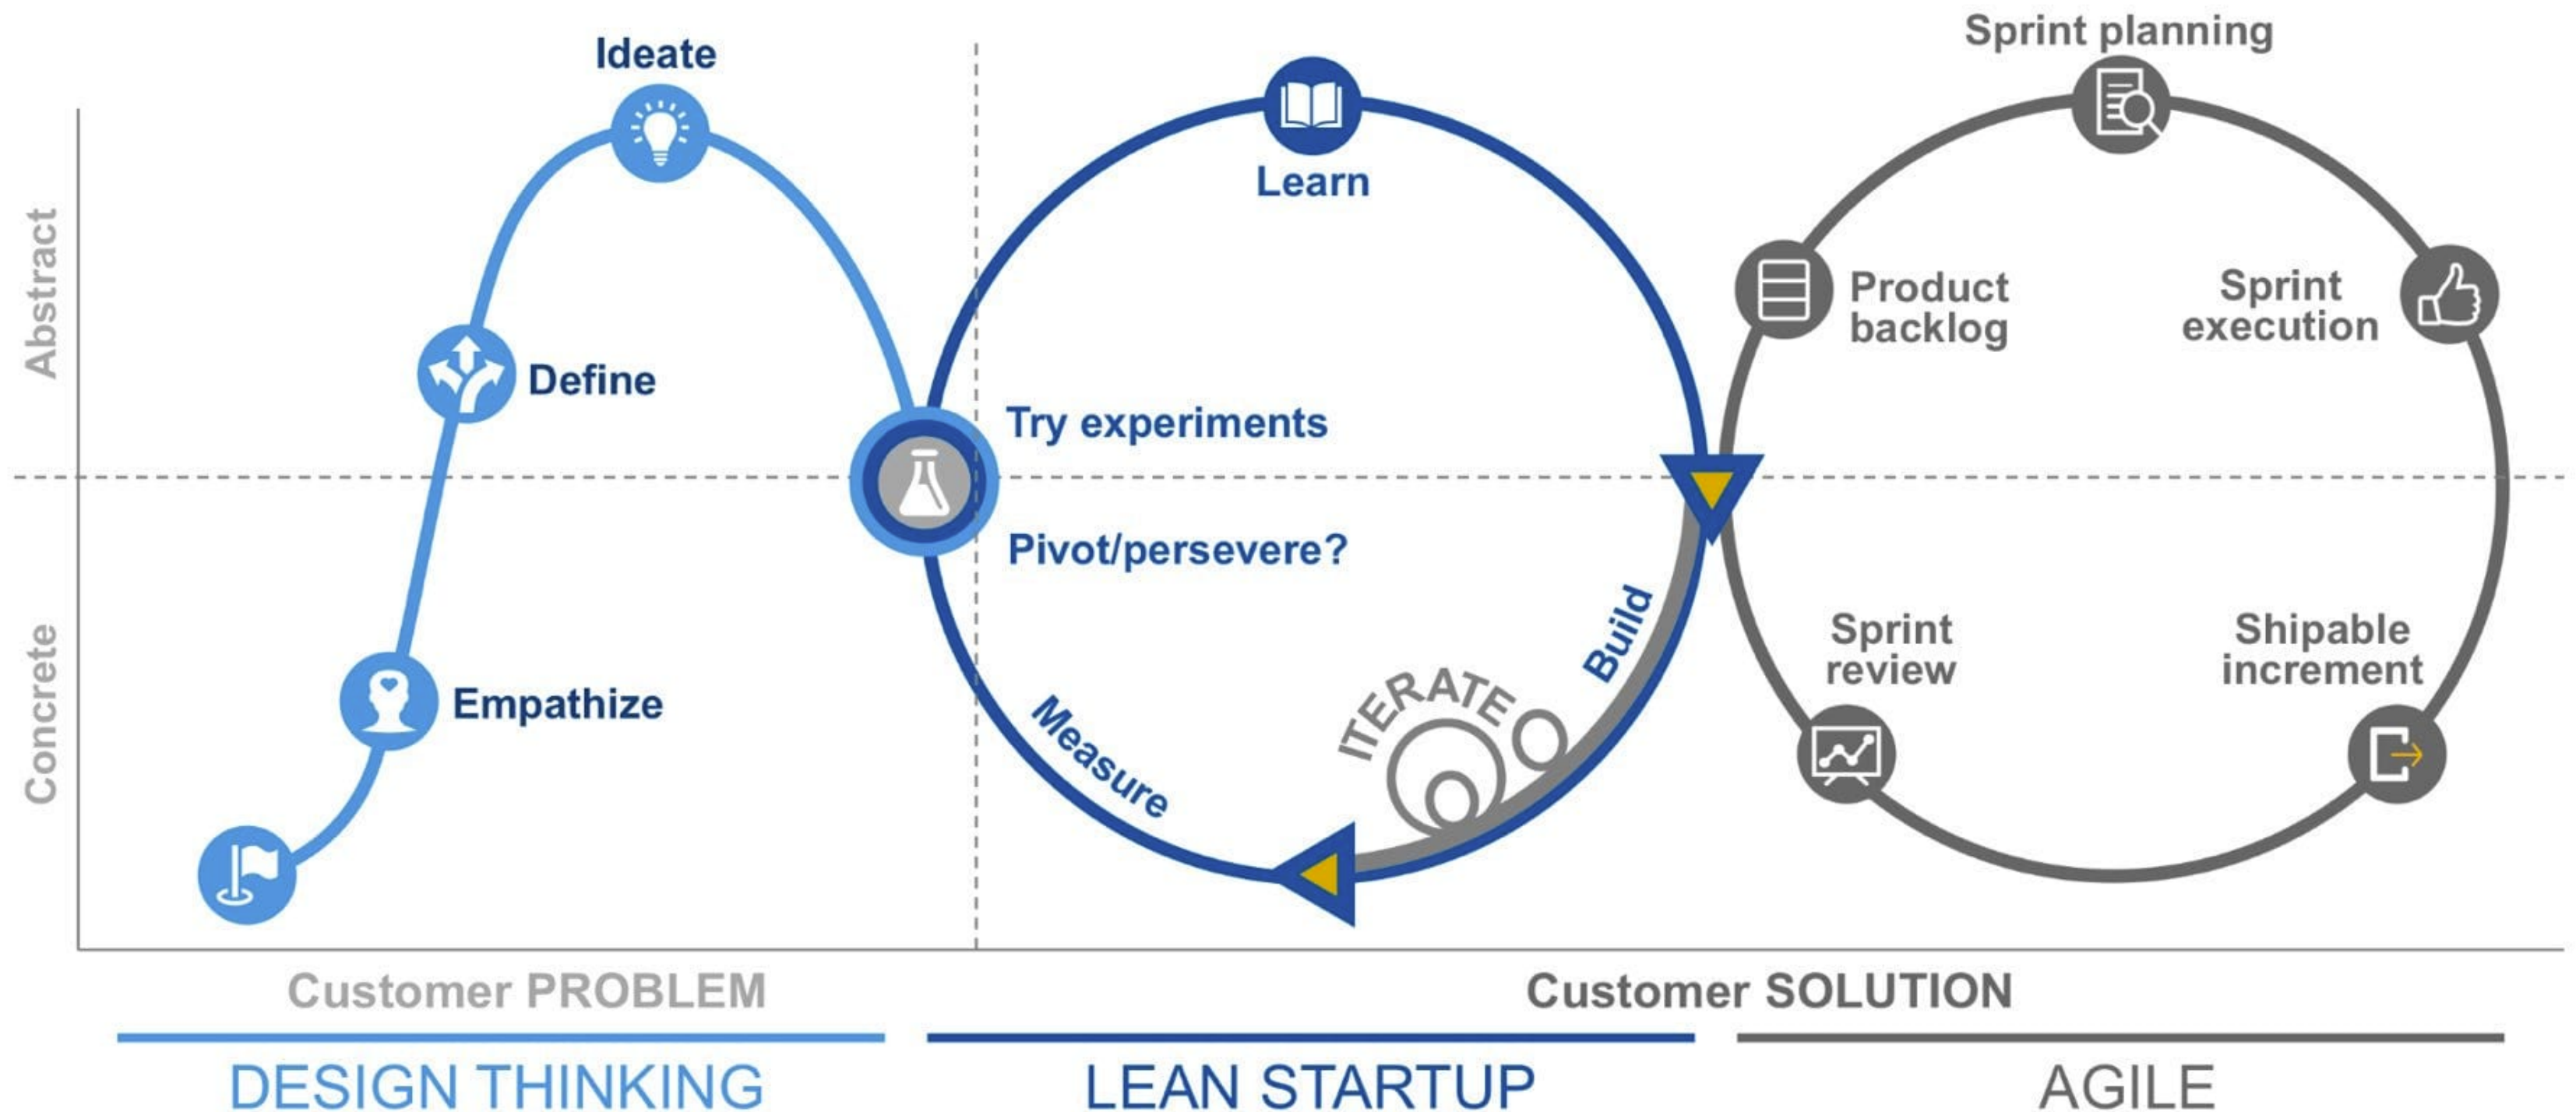

02. Mobile App Design Process

"The purpose of an app design is to deliver seamless and effortless user experiences with a polished look"

USER EXPERIENCE DESIGN PROCESS

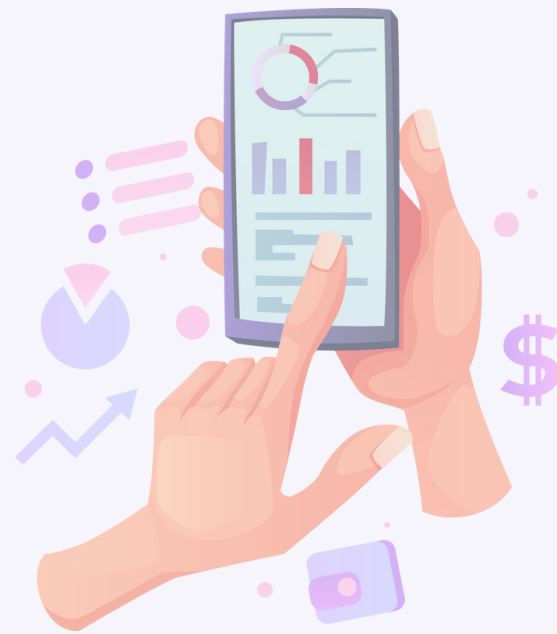

Combine Design Thinking, Lean Startup and Agile

03. Idea Initiation

Human Interaction and Problem Solving

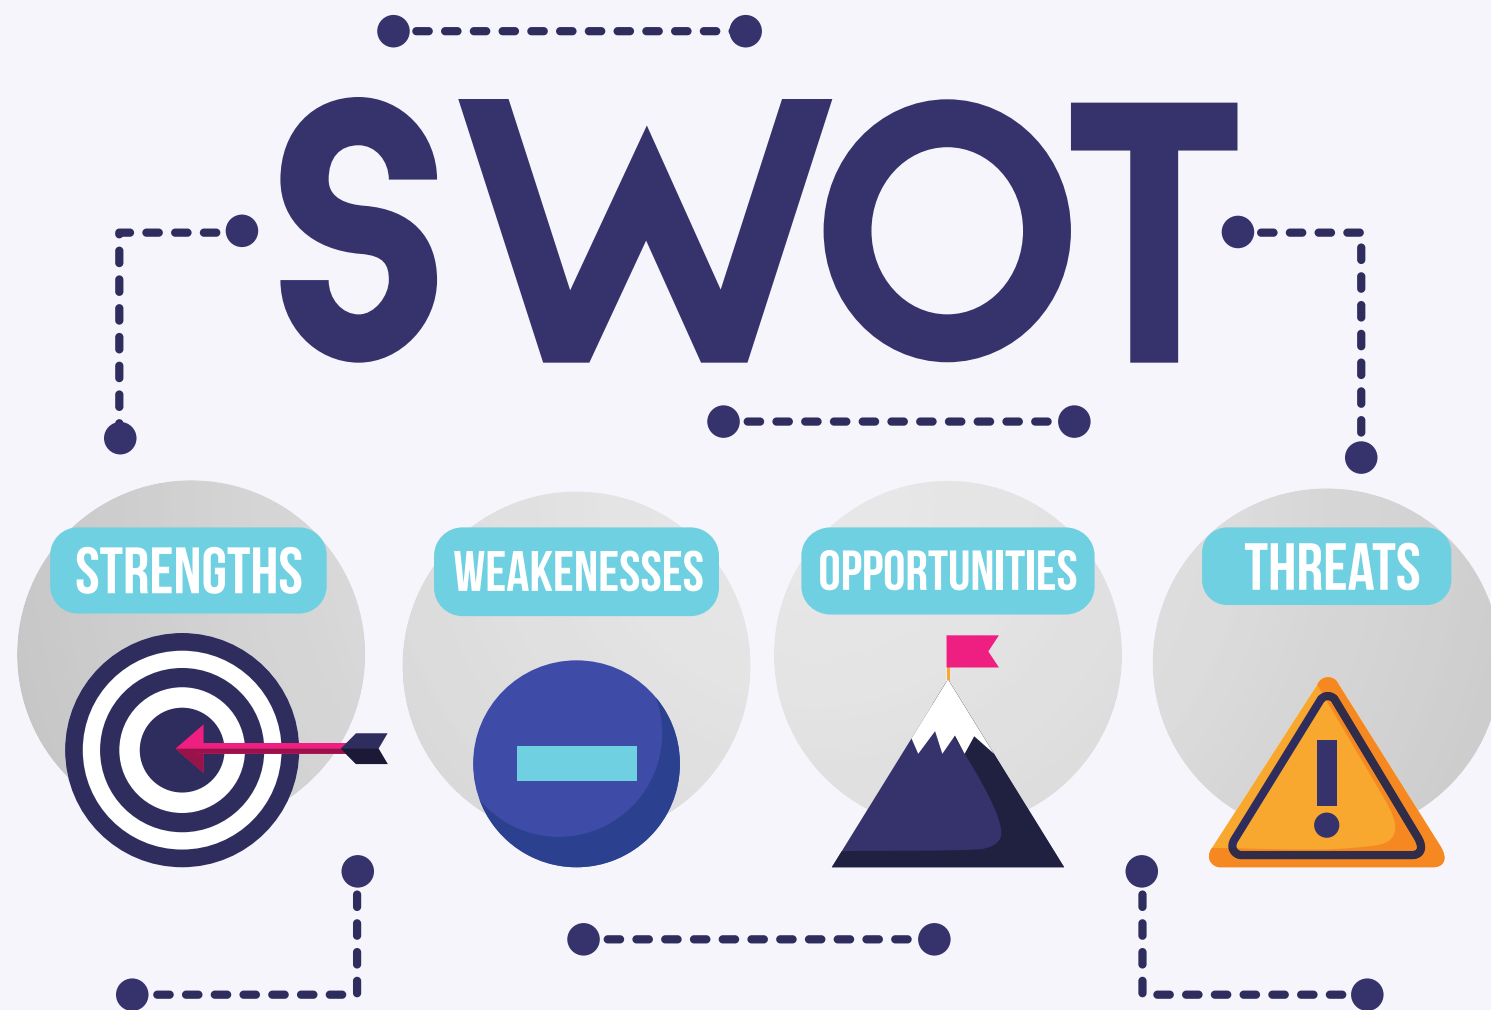

ASK YOURSELF BEFORE START:

- What problems and pain points do I want to solve?
- How might I help users with that problem?
- What kind of app am I designing? (e.g., On Demand, Dating, Social)
- What is my app supposed to do?
- What is the unique selling point of my app?
- How is my app different from my competitors?
- How will my app appeal to my users?

The background is a solid blue color with a faint, stylized illustration of a workspace. It includes a laptop on the left, a pen on the right, and several overlapping sticky notes in the center. The text is overlaid on the sticky notes.

Research is a key step in designing the
user experience

Market Research

- 01 Survey your potential customers
- 02 Collect relevant data (Social Networks, Statistics,...)
- 03 Analyze your competitors' SWOT
- 04 Apply results to your product

HOW TO CREATE A BUSINESS CANVAS TEMPLATE

For An App

IDEA	PROBLEM What problem(s) are you solving?	SOLUTION What is the solution to the problem?	VALUE What value do you offer users?
	ADVANTAGE What advantage do you have over competitors?	CUSTOMER/USER Who is your ideal user? Where are they?	METRICS What will you measure to mark your success?
	CHANNELS How will you reach and gain users?	COSTS What are the costs of running your business?	REVENUE How are you going to make money?

HOW TO CREATE A BUSINESS CANVAS TEMPLATE

For Vino Veritas App

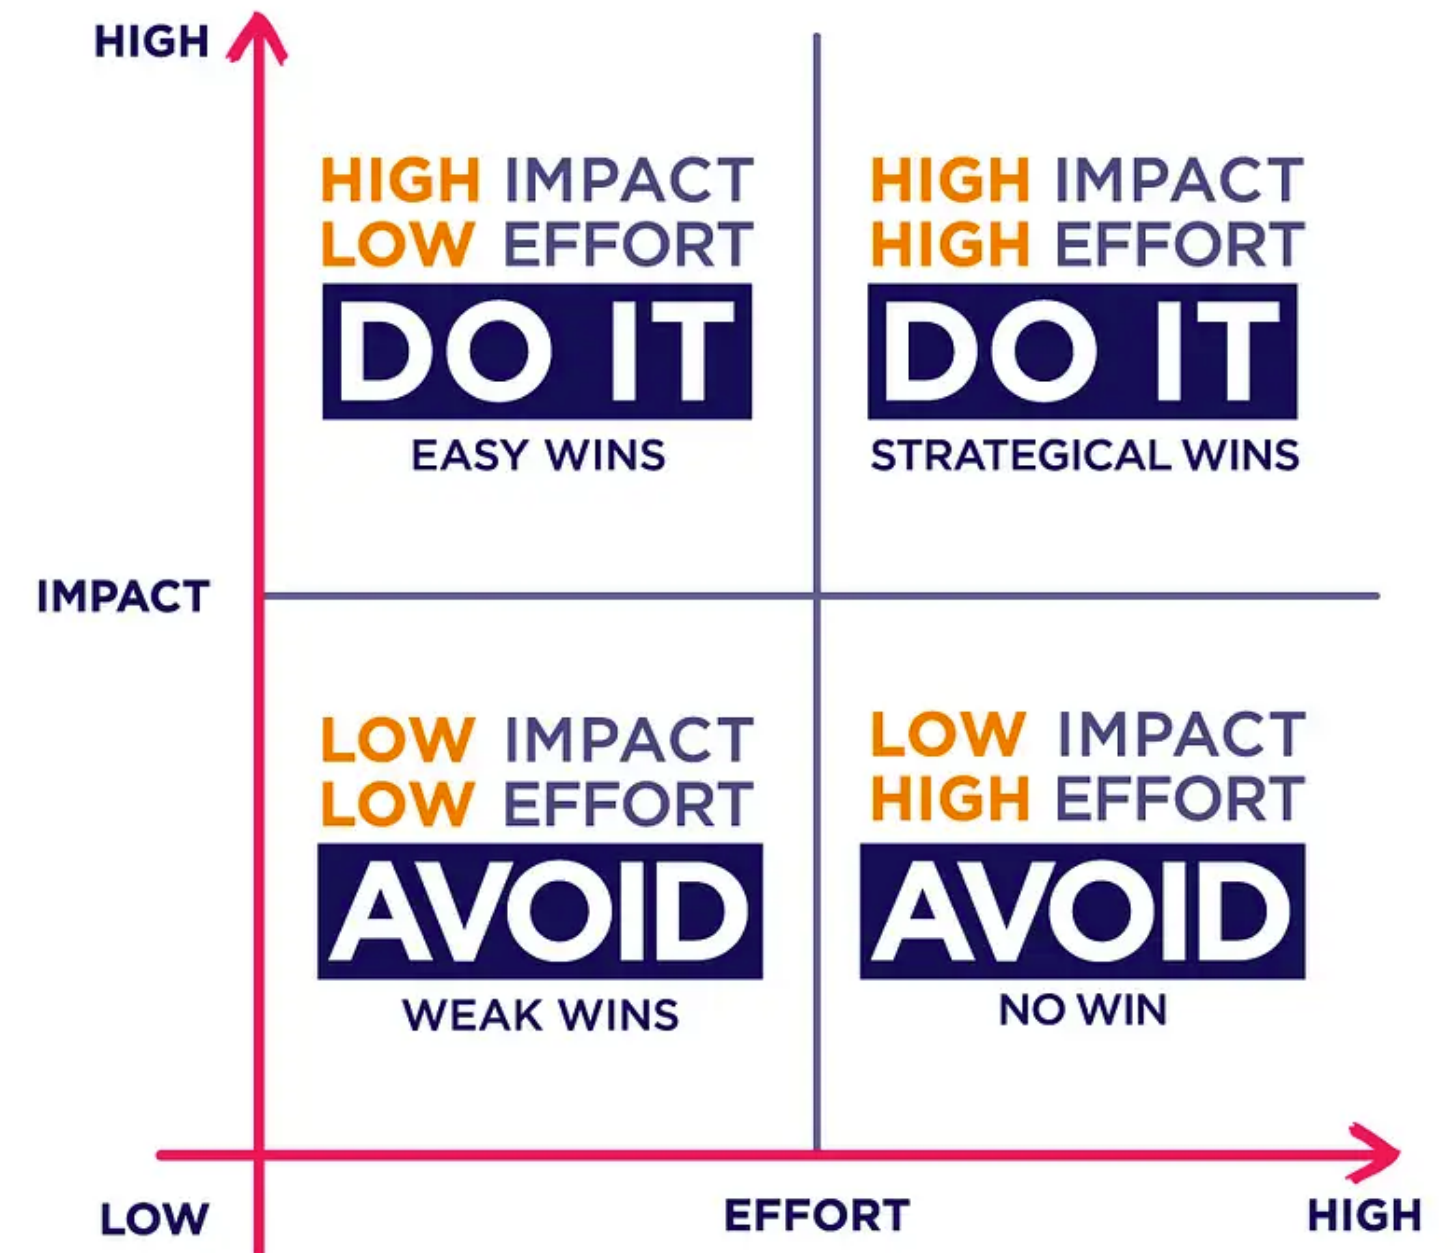

IDEA	PROBLEM	SOLUTION	VALUE
	I don't know how to pick good wine.	Pairings based on big data integration, matching algorithms, and expertise.	Vino Veritas pairs users with wine based on palate, purpose, and price point.
SELL	ADVANTAGE	CUSTOMER/USER	METRICS
	• Advanced Matching Algorithm • Sommelier Experience	• 21 + • Wine Amateurs • Young, Hip, Urban • Women	• # of Subscribers • # of Downloads • User Retention • User Activity • Sales
BUSINESS MODEL	CHANNELS	COSTS	REVENUE
	• Blog • Social Media • Events • Advertising • PR	• App Design • App Development • Sales • Product Management • Marketing	• Sales via Subscription • Advertising • Events • Own Brand Product Sales

04. App Planning

Impact Effort Matrix

Prioritize your app's valuable features.

MVP Features

Identify required requirements

MUST HAVE FEATURES FOR MVP	SHOULD/ COULD HAVE FEATURES
Login/ Account Signup	Real Time Location Tracking
User Profile	Data Collection
Messaging	Data Pipeline
Push Notifications	Recommender System
Matching Algorithms	Loyalty Programs
Payment Integration	In-app Purchasing
Help and Support	Social Verification / Integration
Abuse Reporting / Monitoring	Reviews and Ratings

User Story

A general explanation of a design feature from the user's standpoint

As a [user], I want to/can [goal to achieve] to <receive value>."

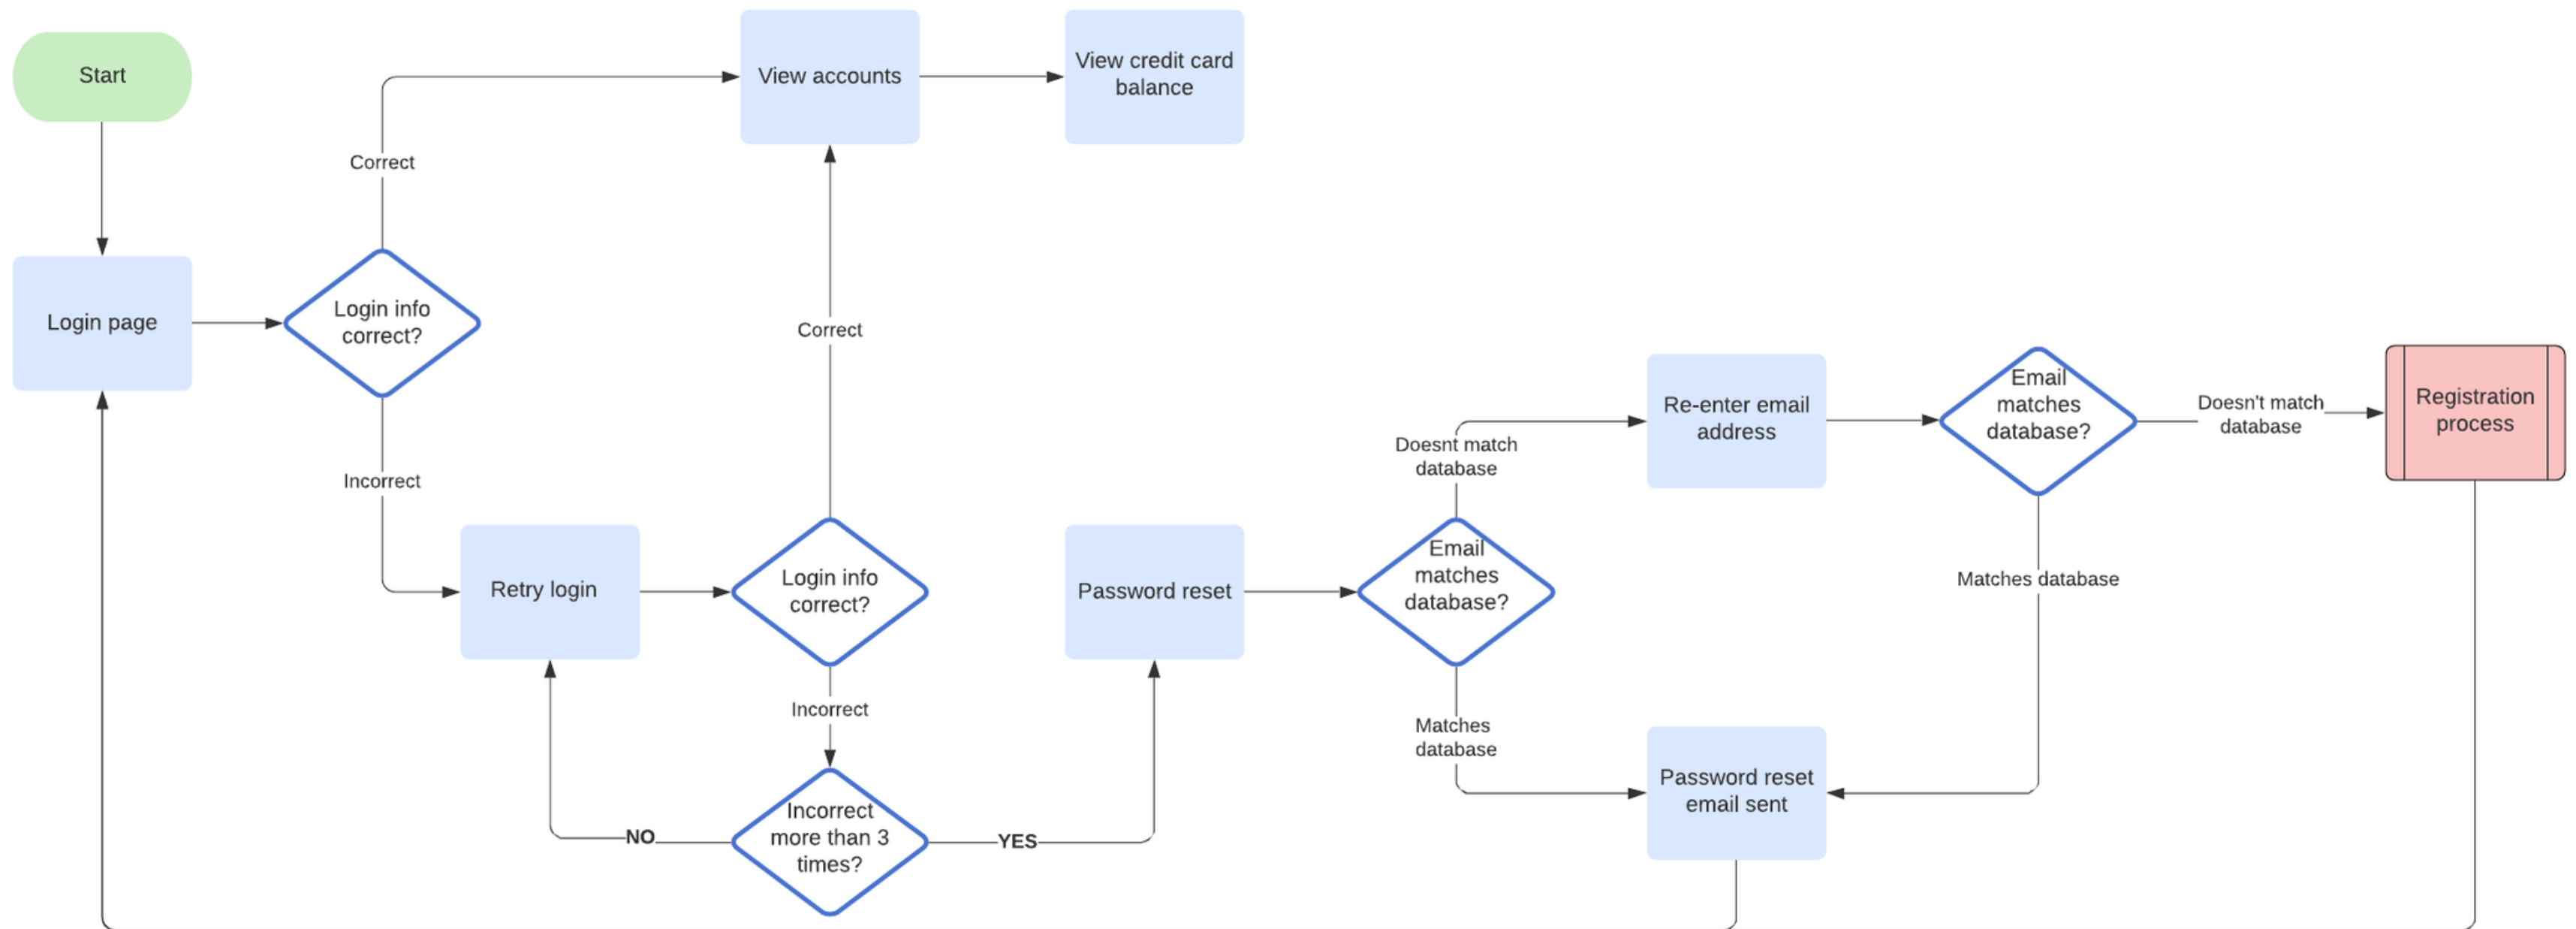

User Story

As a regular fintech app user, I want to withdraw cash from my bank account using the fintech mobile app, so that I can easily draw out cash even without using my card.

Acceptance Criteria

- User can login to the mobile app.
- User can enter the desired amount to withdraw.
- Desired amount is within the user's current balance.
- Accounts are updated concurrently after validation.
- Email and in-app confirmation of transactions are sent to the user.

User Flow Diagram

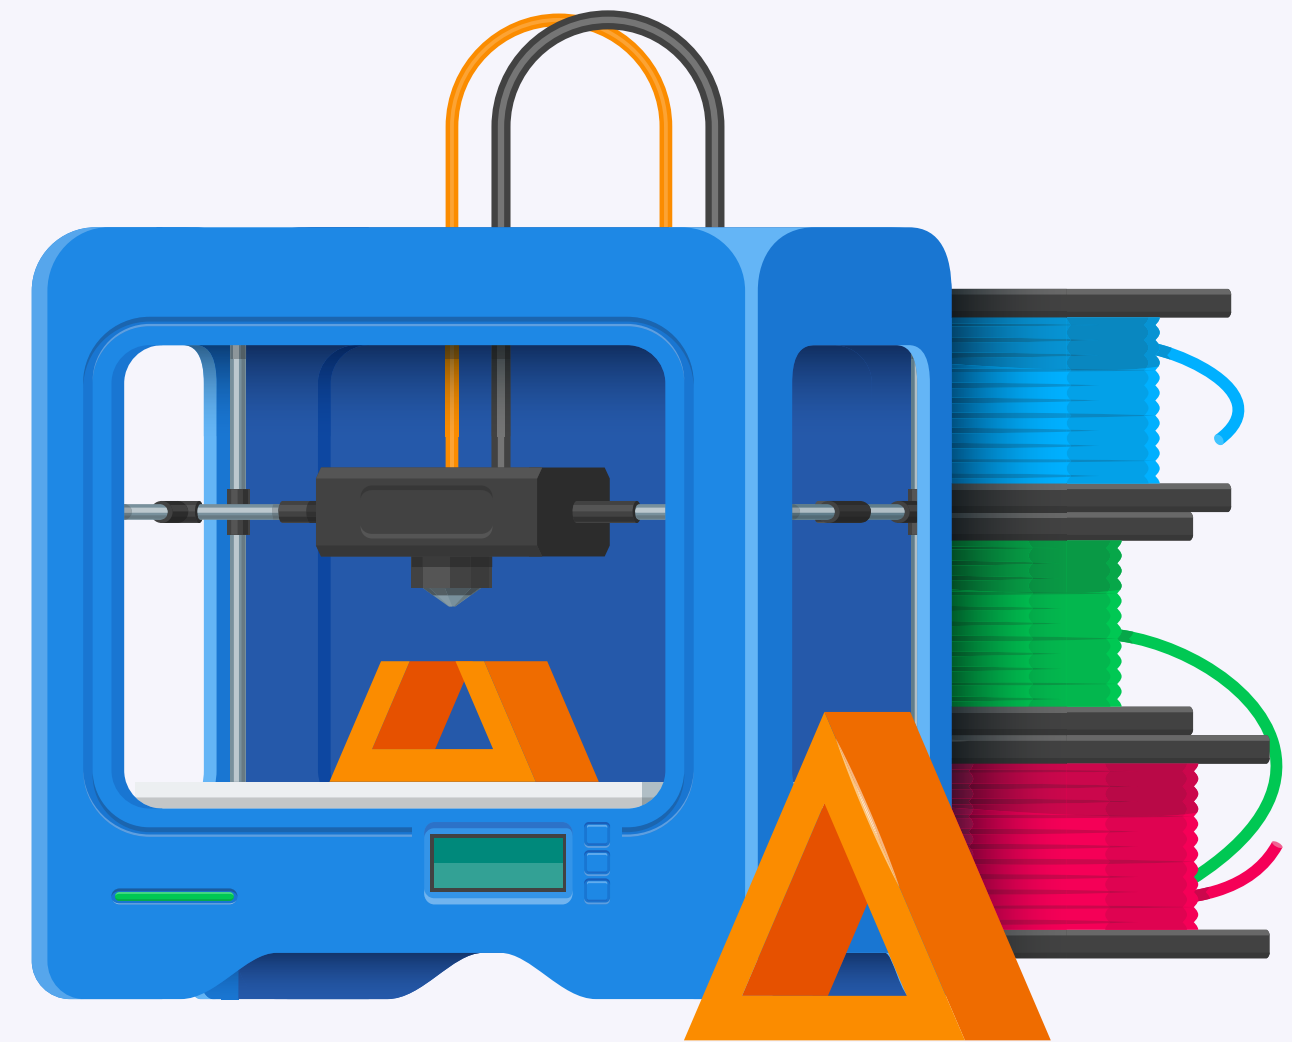

Which mobile platform?

Native, Cross Platform or Hybrid?

Android or iOS or both?

05. Wireframe, Mockup & Prototype

Imagine the app correctly

Translate your ideas onto visual presentations

WIREFRAME

A wireframe is a basic, low-fidelity representation of the initial product concept

A wireframe traditionally only uses black, white, and grey, and can either be drawn by hand or created digitally.

MOCKUP

A mockup is a static, high-fidelity simulation of the finished product that delivers the visual look of the product design—including typography, iconography, color, and overall style.

PROTOTYPE

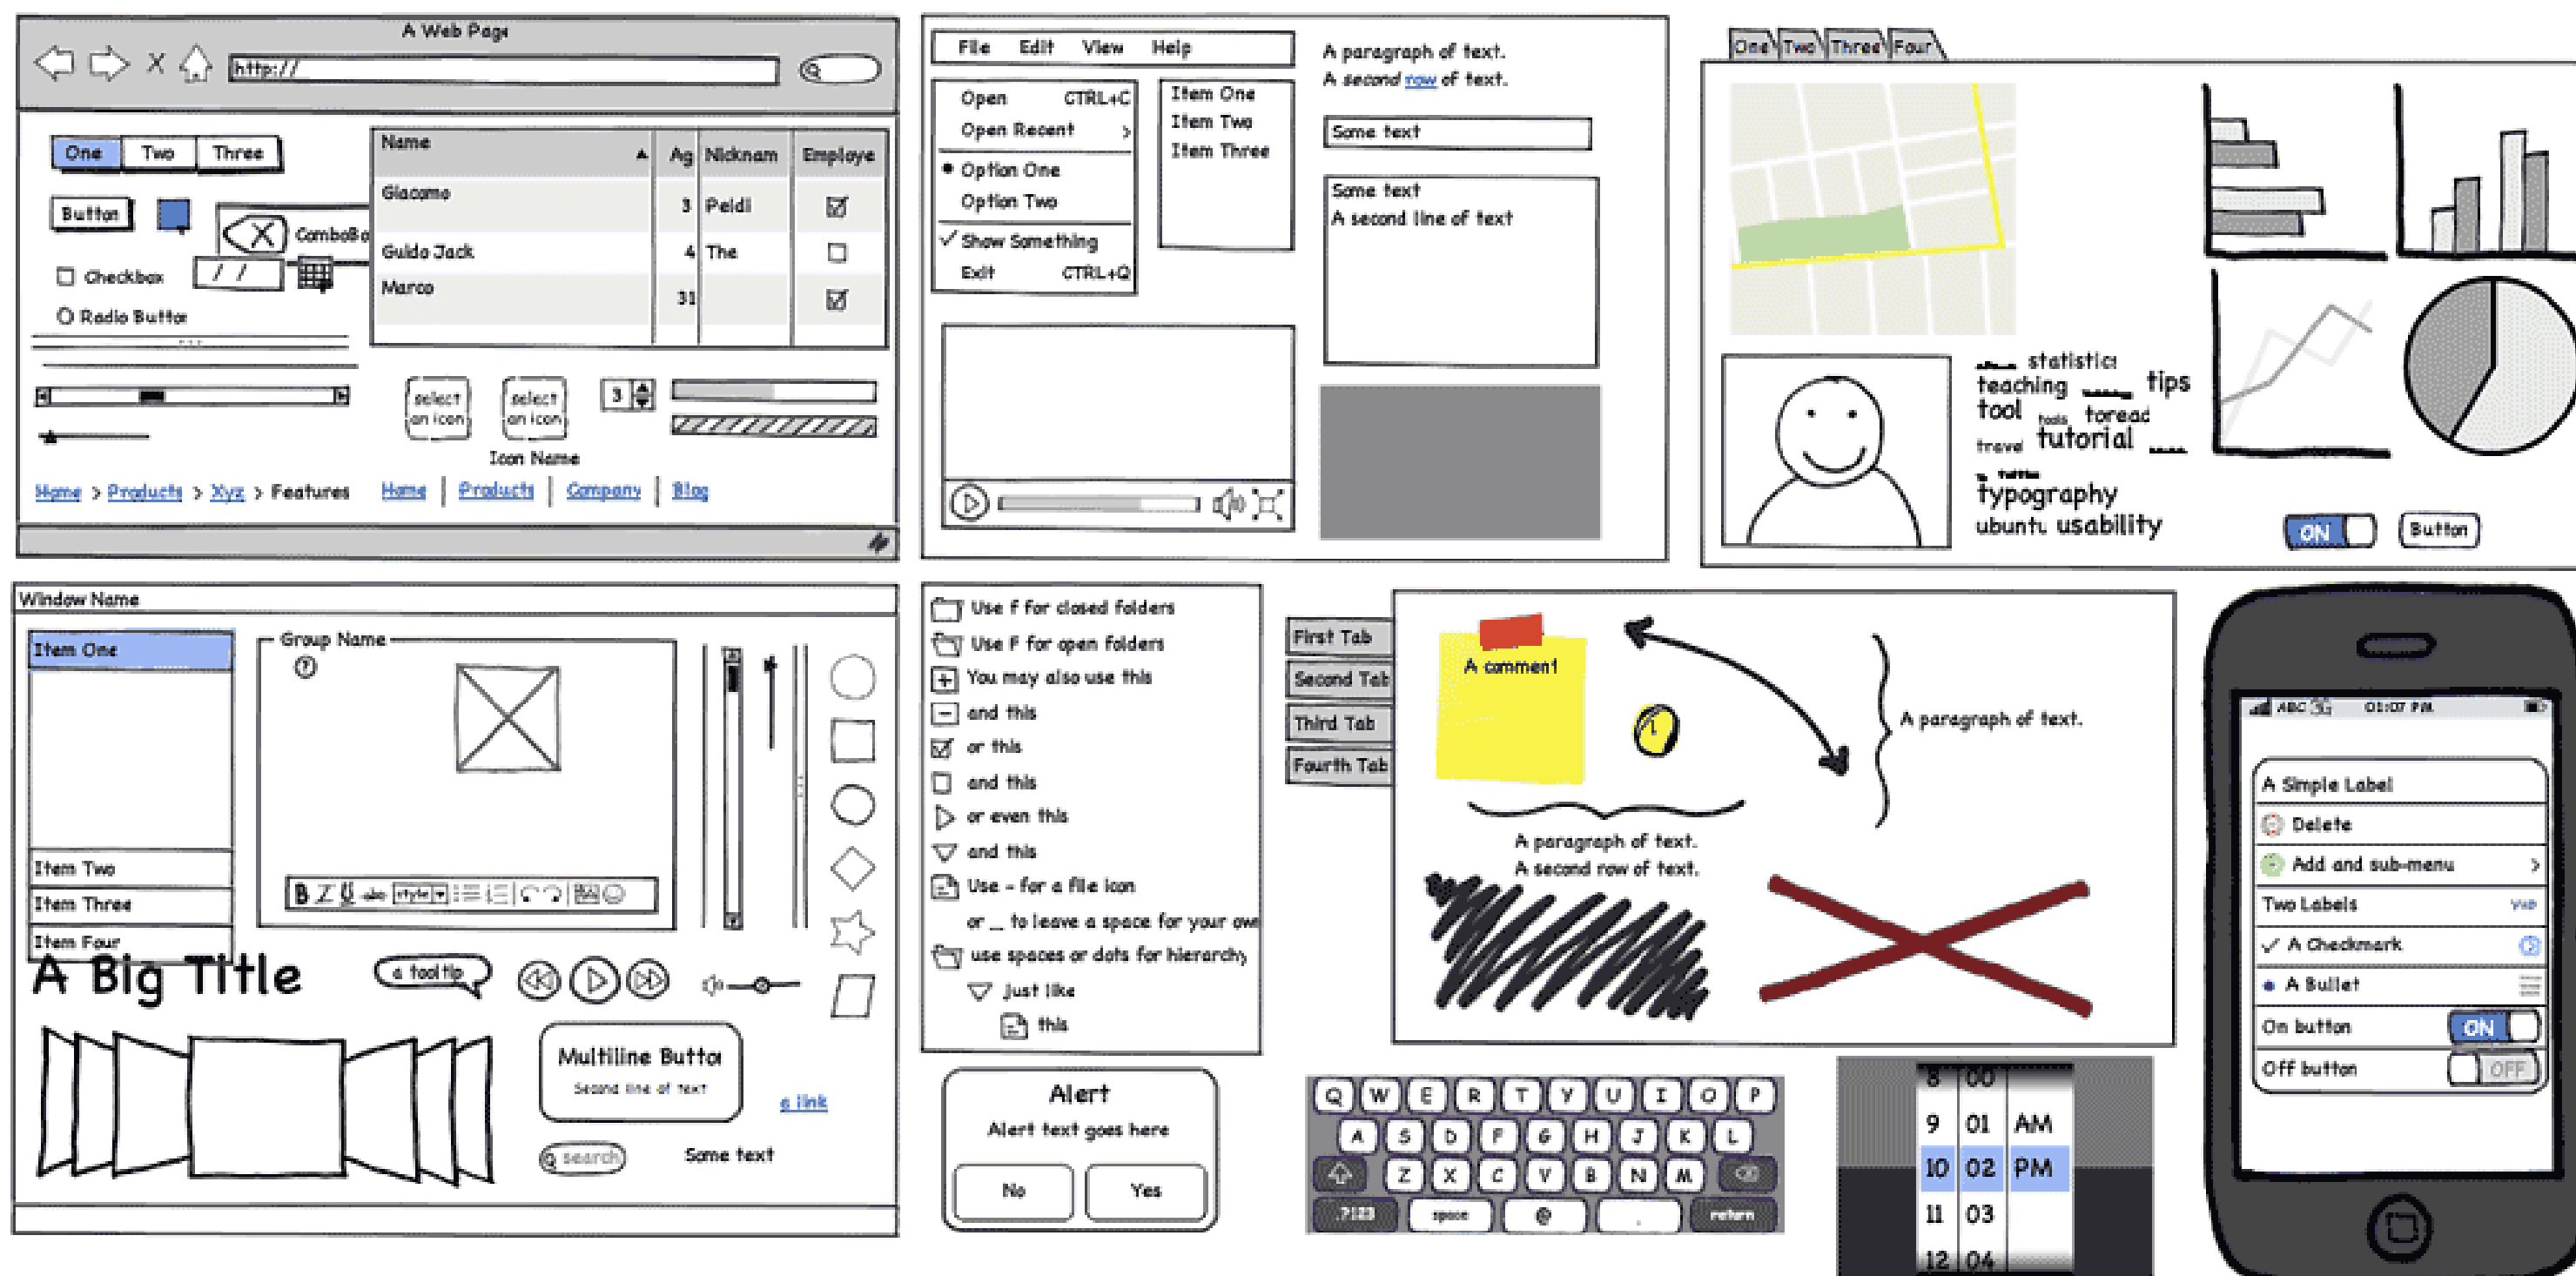

Prototyping allows designers to test the user journey: How the user might move between different actions or tasks to achieve certain outcomes

Wireframe

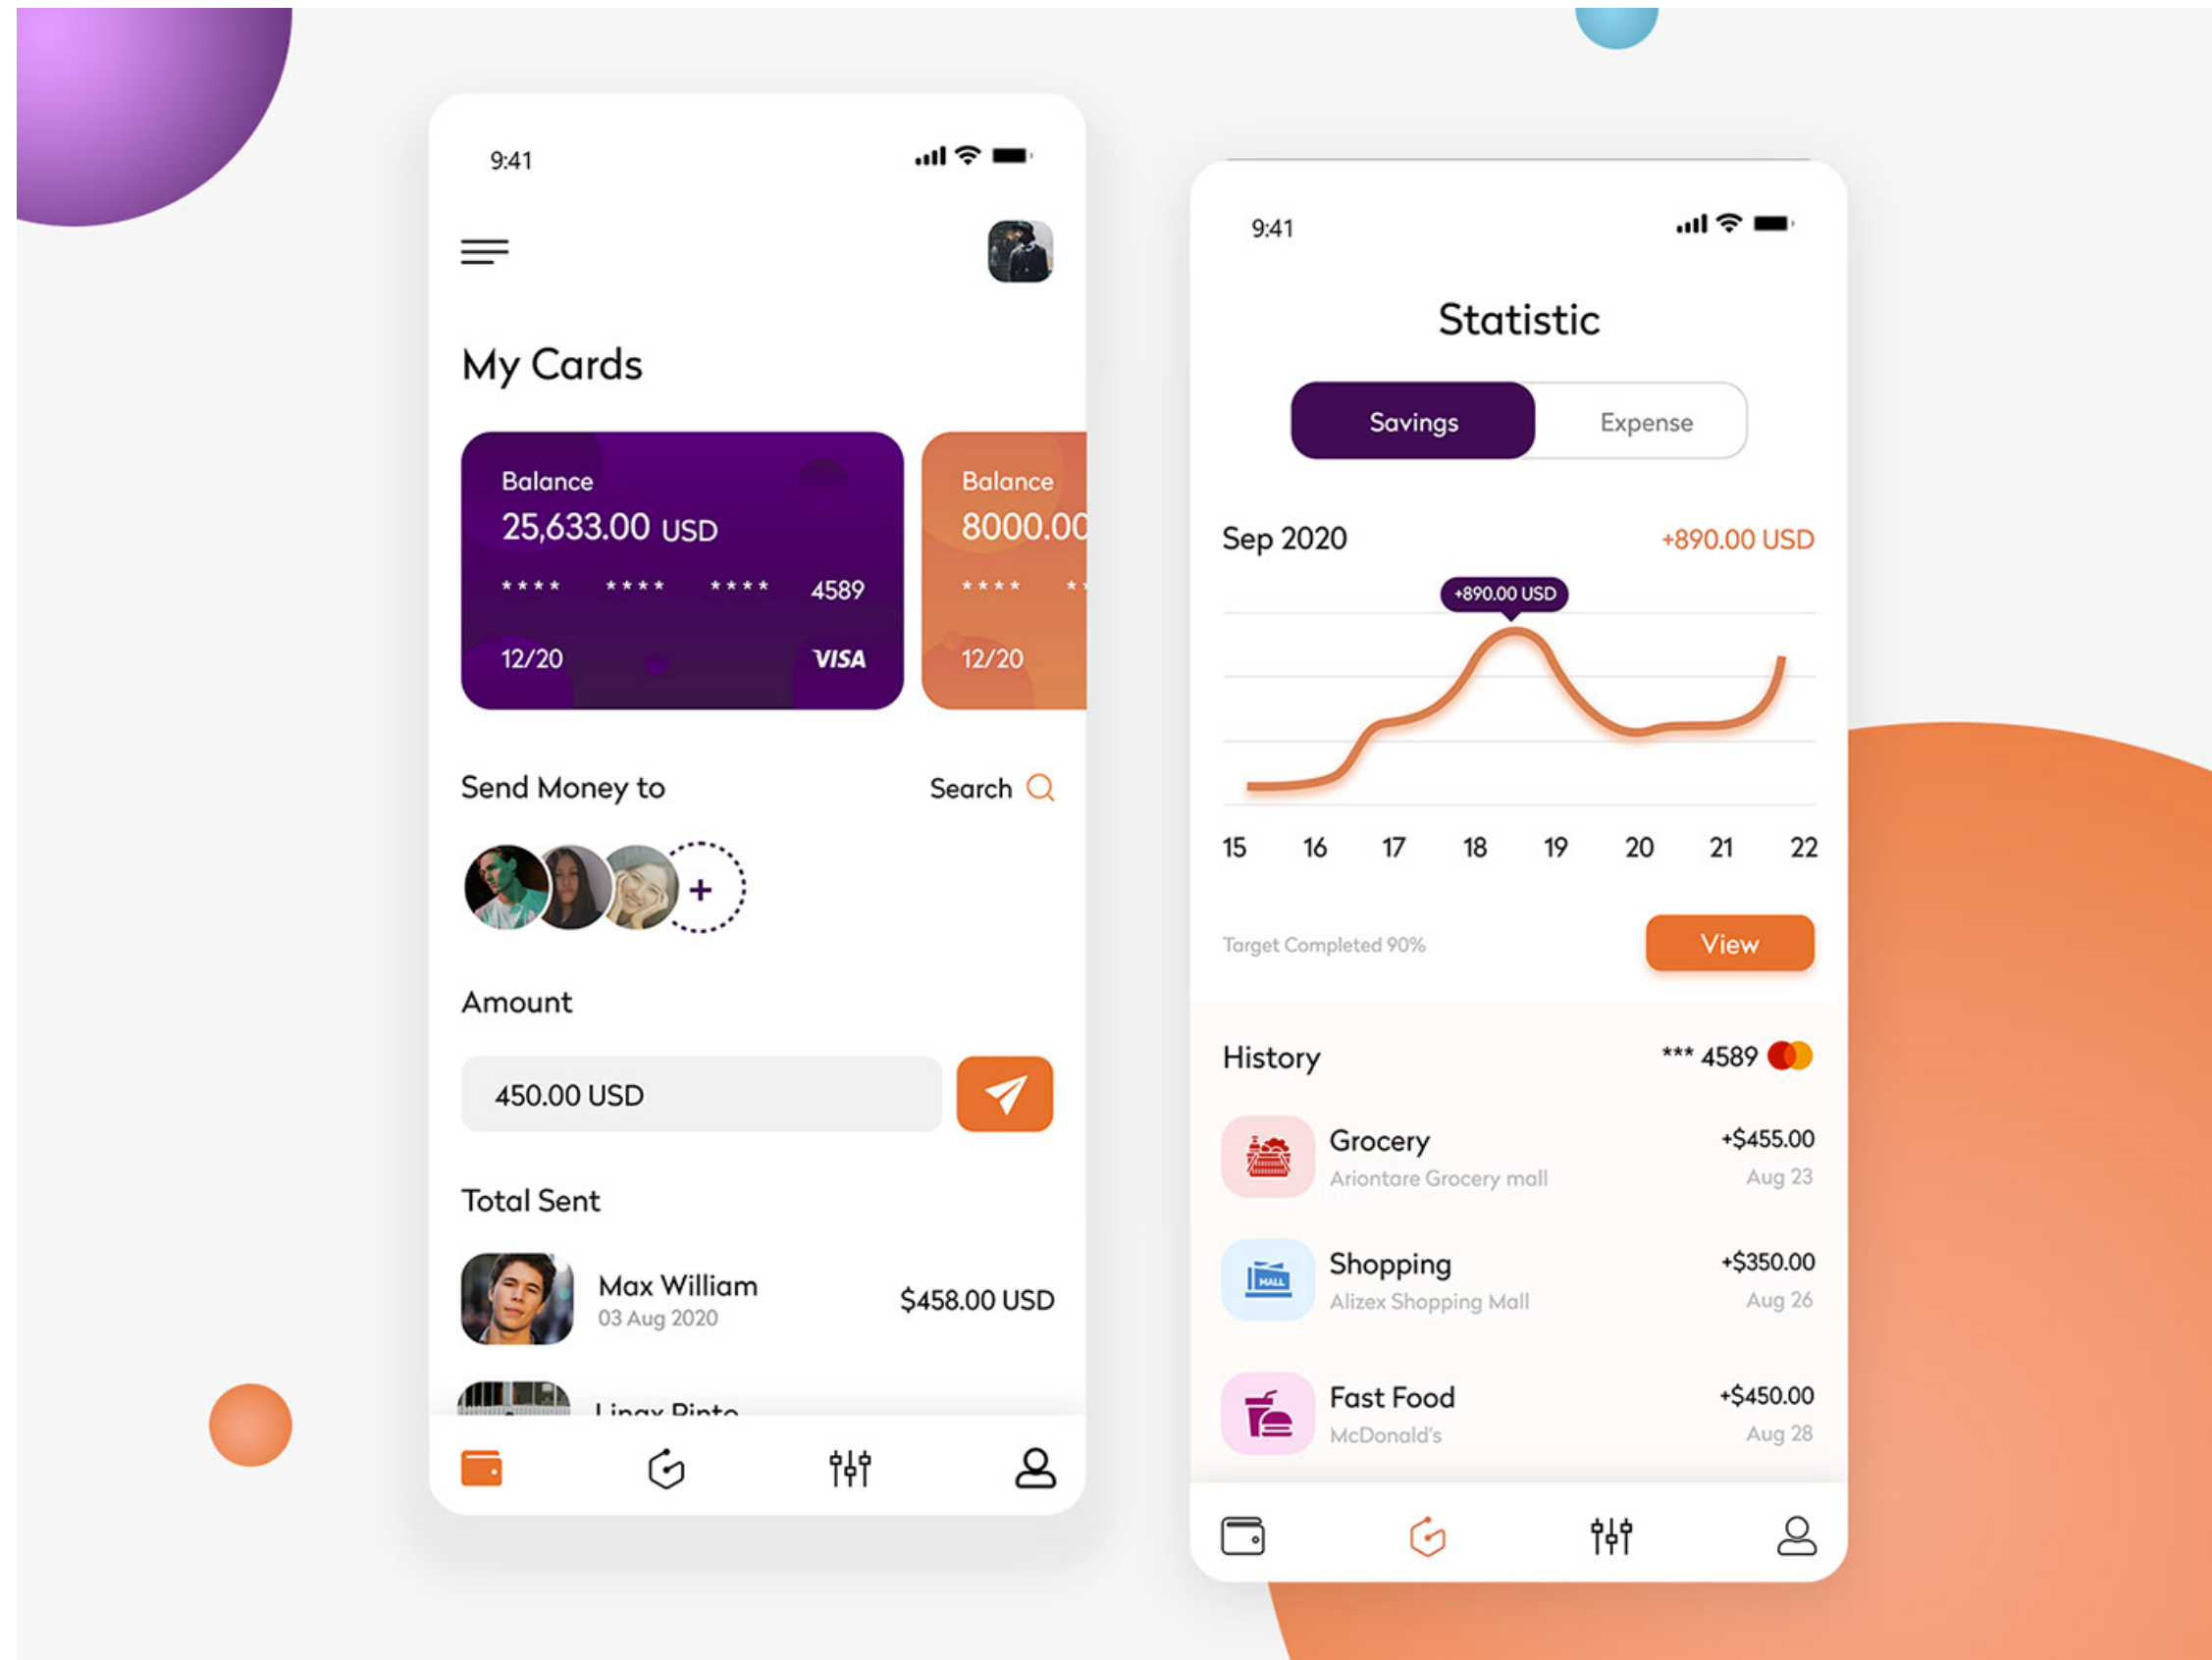

Balsamiq

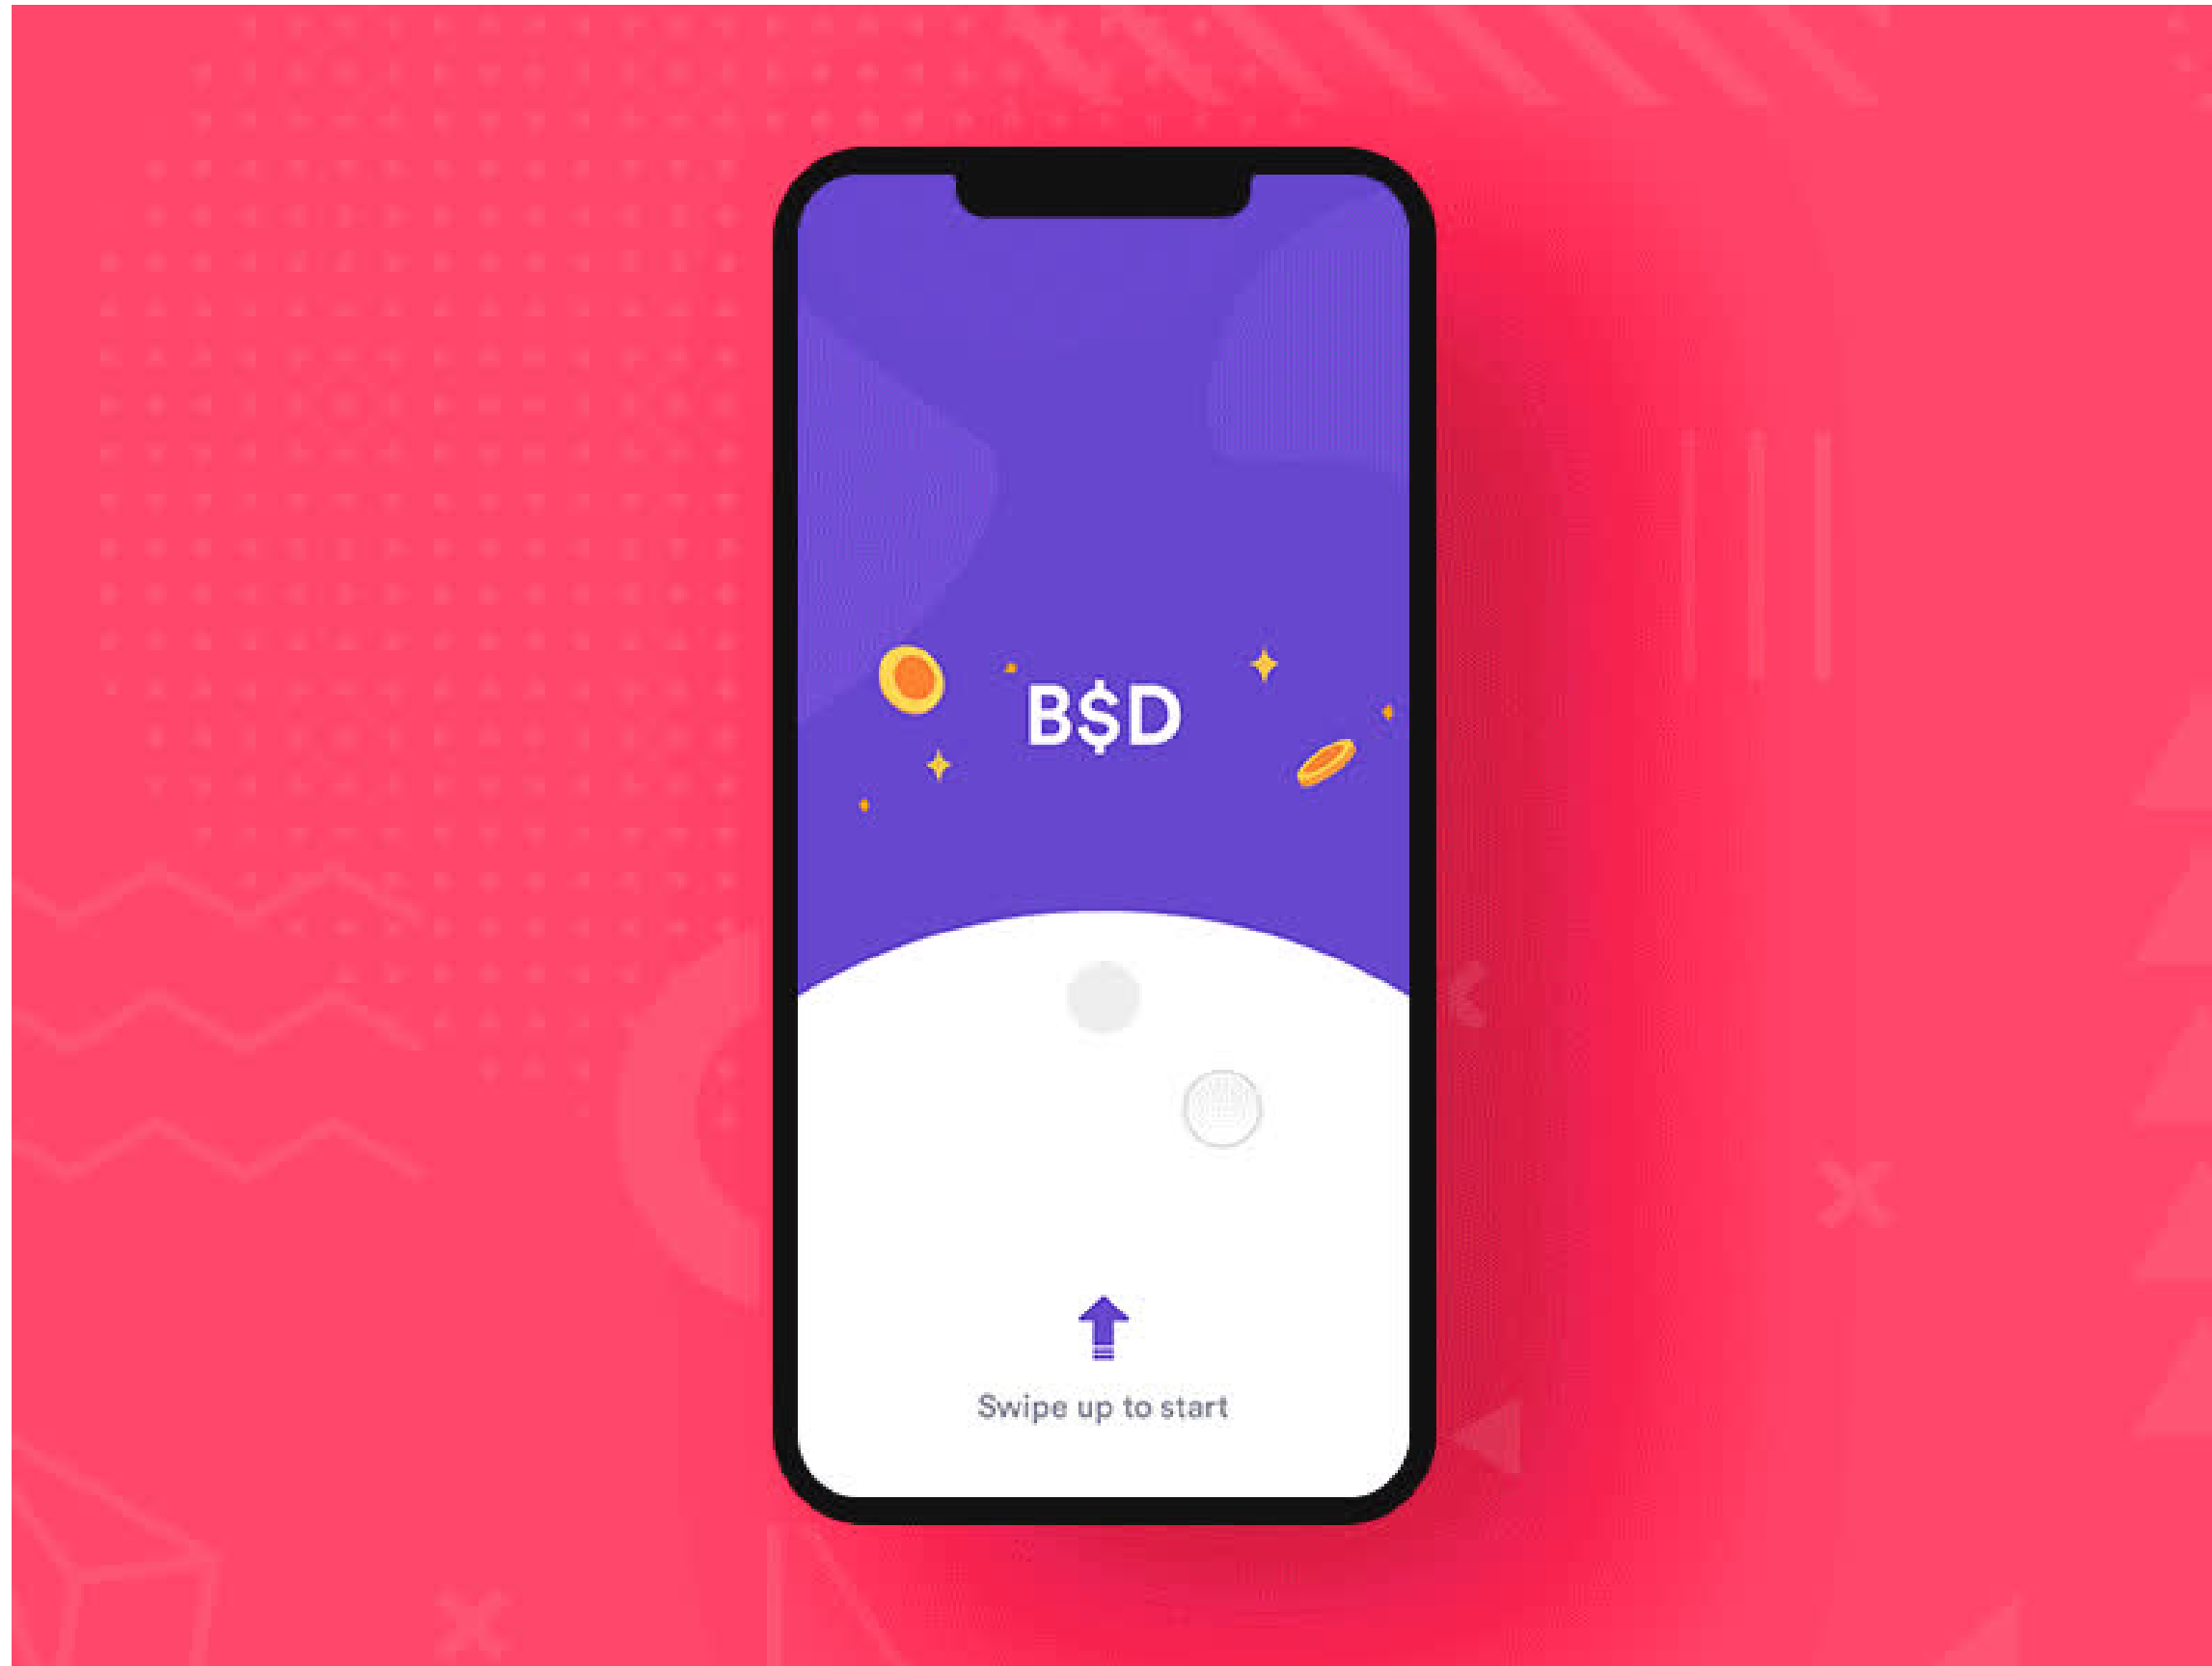

Components for Web, Application, and Mobile Interface Design

Mockup

Prototype

Any questions?
